Hipertensión Arterial Pulmonar
De los síntomas al tratamiento

Dra. Sorasio Guillermina
21-11- 2023

La hipertensión pulmonar (HP) es una enfermedad crónica, multifactorial, de carácter clínico progresivo que se asocia con una con elevada morbimortalidad.

Es una entidad heterogénea, que involucra desde la hipertensión arterial pulmonar (HAP), a entidades más frecuentes como son las asociadas a cardiopatía izquierda y enfermedades pulmonares crónicas

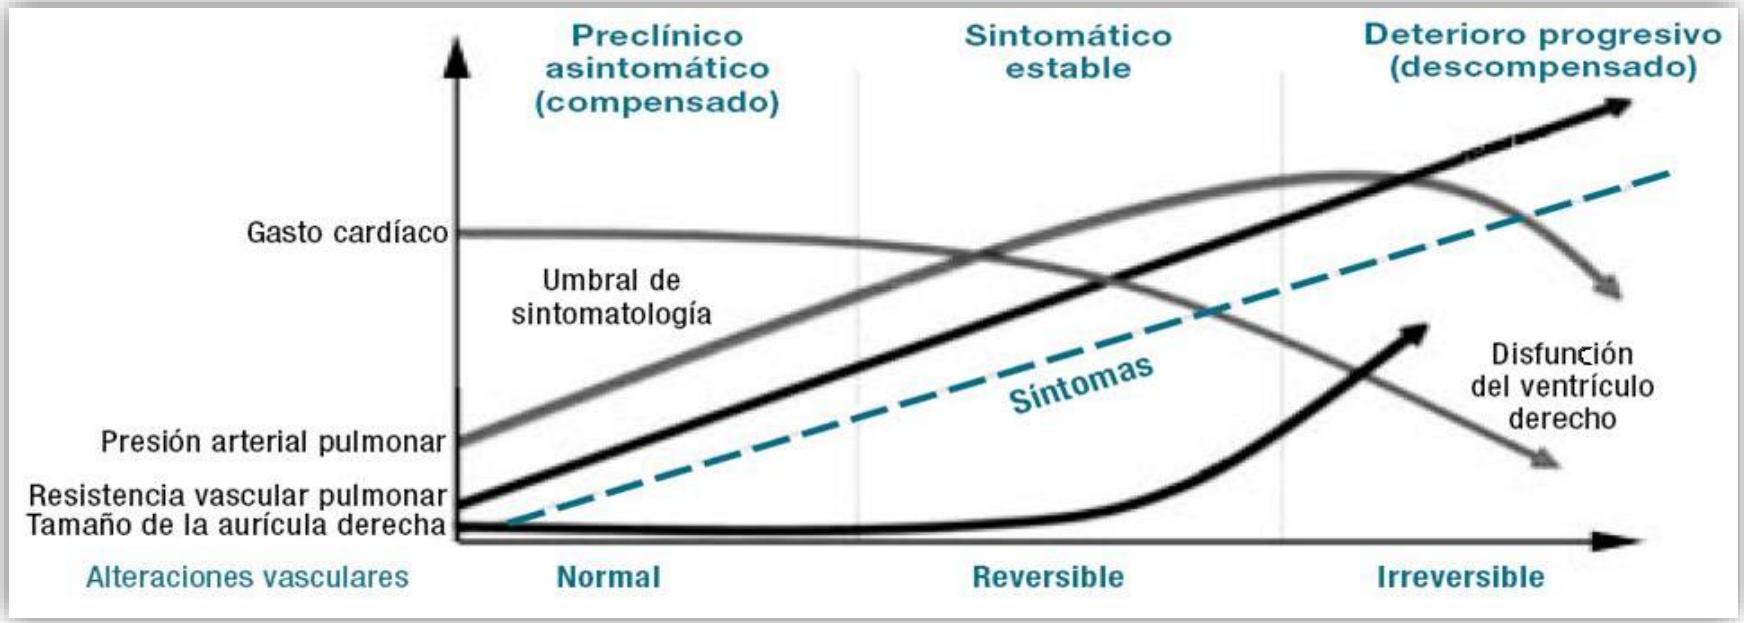
VD: Principal predictor de mortalidad

El estado clínico y el pronóstico depende principalmente de la capacidad del VD para adaptarse al aumento de la poscarga



Bortman G. Revista de Insuficiencia Cardiaca , vol 4, N° 1, 2009

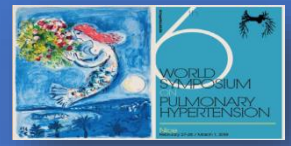
Prevalencia según Grupo Clínico



Updated clinical classification of pulmonary hypertension (PH)

1 PAH
- 1.1 Idiopathic PAH
- 1.2 Heritable PAH
- 1.3 Drug- and toxin-induced PAH (table 3)
- 1.4 PAH associated with:
  - 1.4.1 Connective tissue disease
  - 1.4.2 HIV infection
  - 1.4.3 Portal hypertension
  - 1.4.4 Congenital heart disease
  - 1.4.5 Schistosomiasis
- 1.5 PAH long-term responders to calcium channel blockers (table 4)
- 1.6 PAH with overt features of venous/capillaries (PVOD/PCH) involvement
- 1.7 Persistent PH of the newborn syndrome

< 5%

2 PH due to left heart disease
- 2.1 PH due to heart failure with preserved LVEF
- 2.2 PH due to heart failure with reduced LVEF
- 2.3 Valvular heart disease
- 2.4 Congenital/acquired cardiovascular conditions leading to post-capillary

80%

3 PH due to lung diseases and/or hypoxia
- 3.1 Obstructive lung disease
- 3.2 Restrictive lung disease
- 3.3 Other lung disease with mixed restrictive/obstructive pattern
- 3.4 Hypoxia without lung disease
- 3.5 Developmental lung disorders

10%

4 PH due to pulmonary artery obstructions (table 6)
- 4.1 Chronic thromboembolic PH
- 4.2 Other pulmonary artery obstructions

< 5%

5 PH with unclear and/or multifactorial mechanisms (table 7)
- 5.1 Haematological disorders
- 5.2 Systemic and metabolic disorders
- 5.3 Others
- 5.4 Complex congenital heart disease

5%

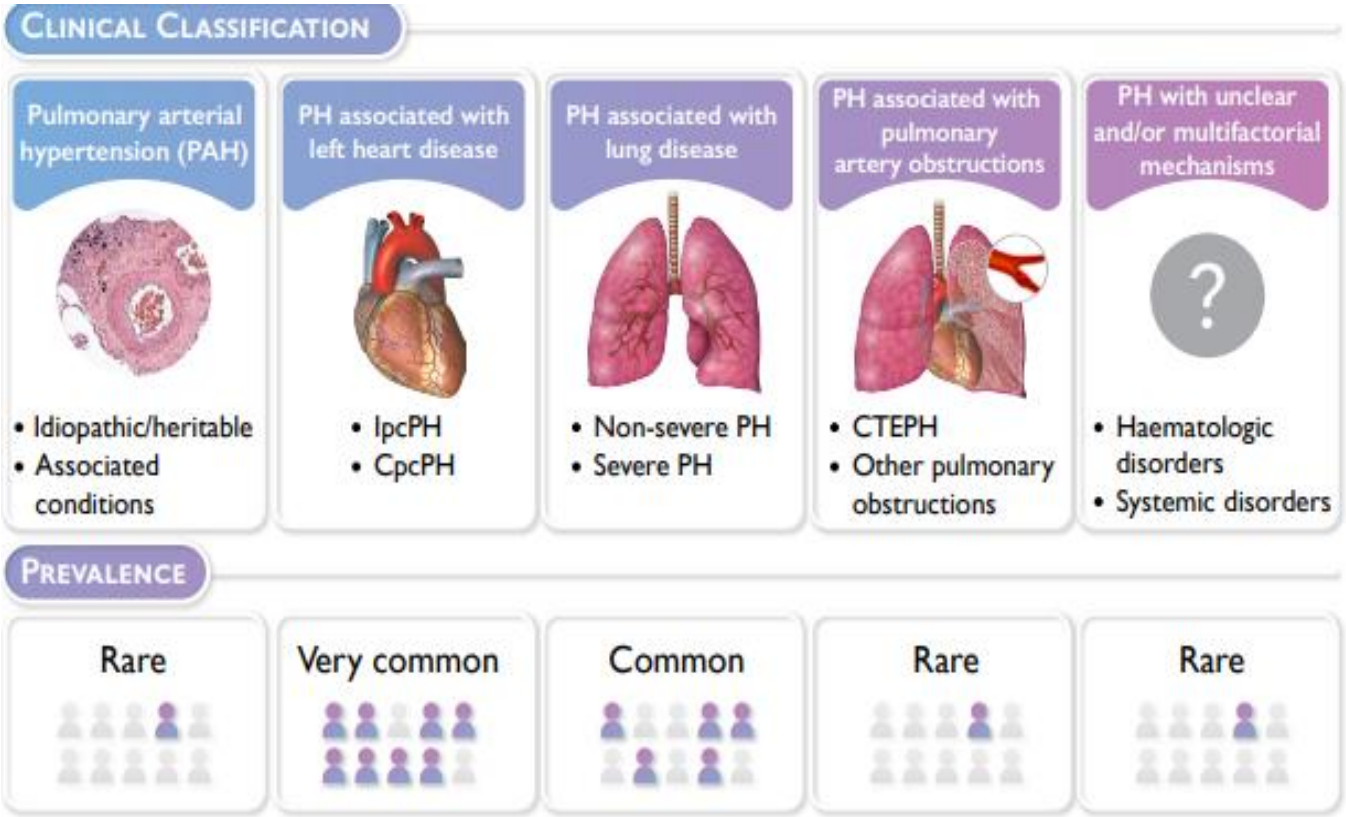
Clasificación Clínica de la HP



Humbert M et al. European Heart Journal (2022) 00, 1–114

Clasificación Clínica

ESC European Society of Cardiology

GROUP 1 Pulmonary arterial hypertension (PAH)
- 1.1 Idiopathic
  - 1.1.1 Non-responders at vasoreactivity testing
  - 1.1.2 Acute responders at vasoreactivity testing
- 1.2 Heritable[a]
- 1.3 Associated with drugs and toxins[a]
- 1.4 Associated with:
  - 1.4.1 Connective tissue disease
  - 1.4.2 HIV infection
  - 1.4.3 Portal hypertension
  - 1.4.4 Congenital heart disease
  - 1.4.5 Schistosomiasis
- 1.5 PAH with features of venous/capillary (PVOD/PCH) involvement
- 1.6 Persistent PH of the newborn

GROUP 2 PH associated with left heart disease
- 2.1 Heart failure:
  - 2.1.1 with preserved ejection fraction
  - 2.1.2 with reduced or mildly reduced ejection fraction[b]
- 2.2 Valvular heart disease
- 2.3 Congenital/acquired cardiovascular conditions leading to post-capillary PH

GROUP 3 PH associated with lung diseases and/or hypoxia
- 3.1 Obstructive lung disease or emphysema
- 3.2 Restrictive lung disease
- 3.3 Lung disease with mixed restrictive/obstructive pattern
- 3.4 Hypoventilation syndromes
- 3.5 Hypoxia without lung disease (e.g. high altitude)
- 3.6 Developmental lung disorders

GROUP 4 PH associated with pulmonary artery obstructions
- 4.1 Chronic thrombo-embolic PH
- 4.2 Other pulmonary artery obstructions[c]

GROUP 5 PH with unclear and/or multifactorial mechanisms
- 5.1 Haematological disorders[d]
- 5.2 Systemic disorders[e]
- 5.3 Metabolic disorders[f]
- 5.4 Chronic renal failure with or without haemodialysis
- 5.5 Pulmonary tumour thrombotic microangiopathy
- 5.6 Fibrosing mediastinitis

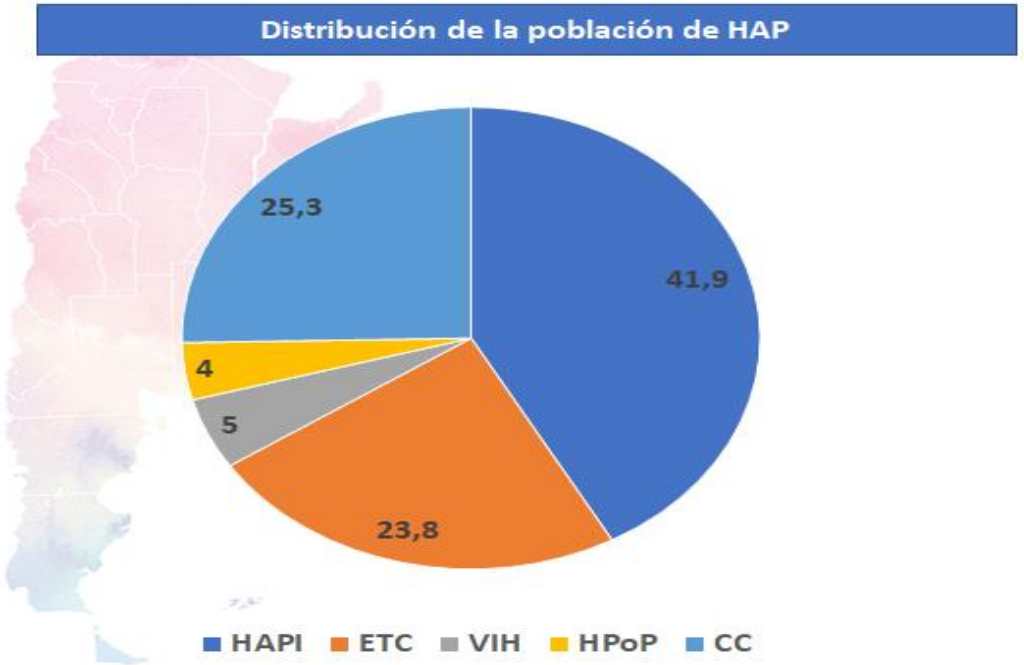
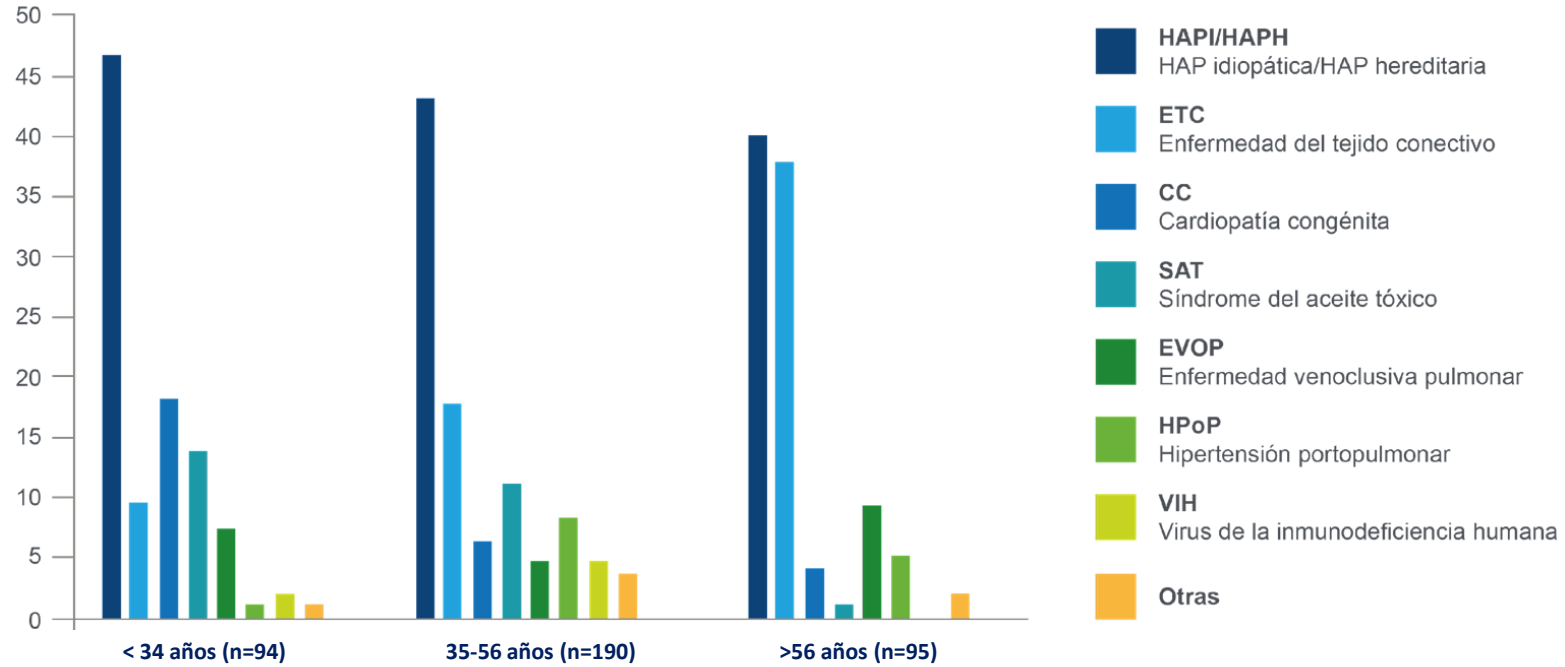
Grupo 2: 100
Group 3: 52
Group 4: 61
Group 5: 15



GRUPO 1: HIPERTENSIÓN ARTERIAL PULMONAR (HAP)

Distribución por etiologías[1]



Adaptado de Figura 2 de Quezada-Loaiza C, *et al*. 2017. Dsitribución de los pacientes por percentil de edad., disponible en el anexo

1. Quezada Loaiza C, *et al*. Trends in Pulmonary Hypertension Over a Period of 30 Years: Experience From a Single Referral Centre. Rev Esp Cardiol. 2017 Nov;70(11):915-923. doi: 10.1016/j.rec.2016.12.044

Epidemiología de la HAP

Enfermedad Rara

Incidencia : 5,8 casos cada millón habitantes por año
(1,5 y 32 (ppm)/año)

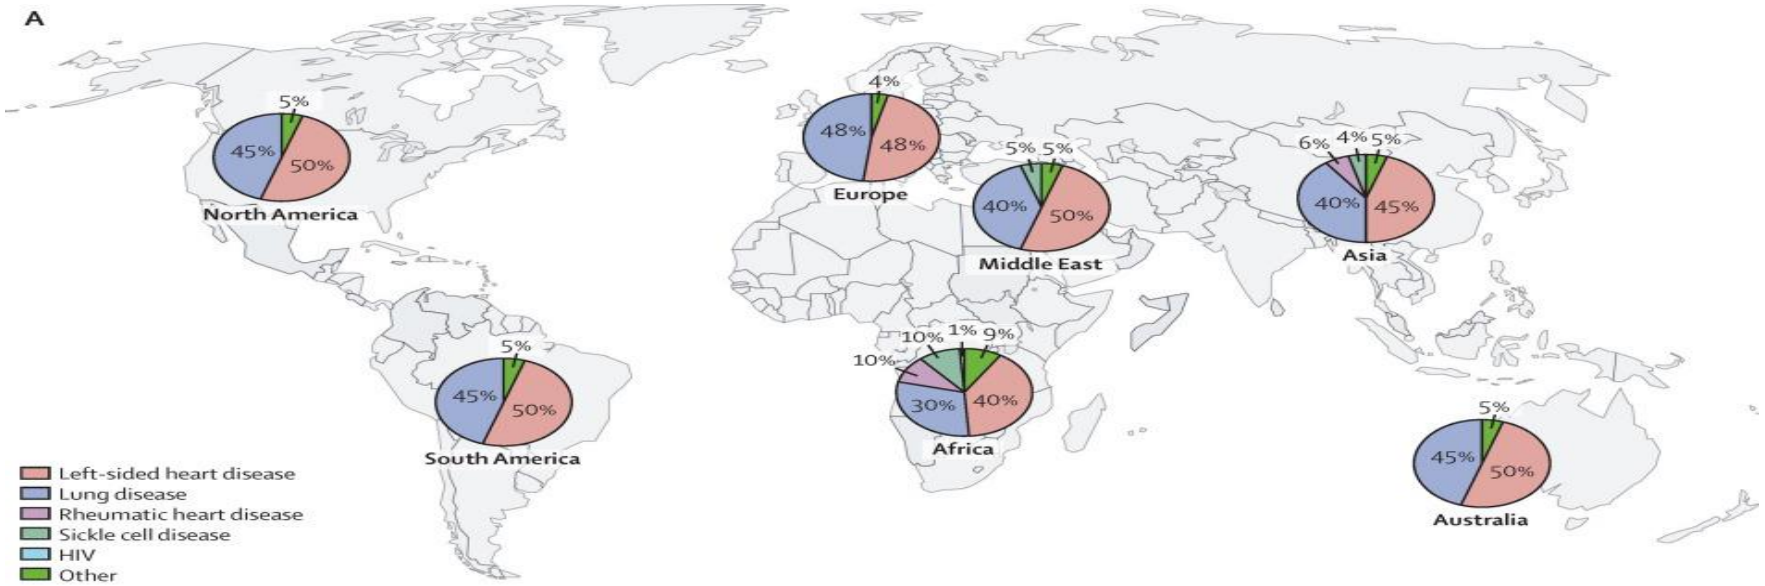
Prevalencia : 15 -26 casos por millón habitantes (47,6- 54,7)

Predomina en el sexo femenino : 2:1 3:1 4:1 (55-81%)

Edad: 43 - 67 años

Valverde et al. BMC Pulmonary Medicine (2018) 18:106
Leber. Pulmonary Circulation (2021):;11(1):2045894020977300

Prevalencia de HP: Etiología según región



Hoeper.Lancet Respir Medic. 2016;4:306-322

Diagnóstico Desafiante

- Los síntomas inespecíficos de la HP demoran el diagnóstico de la patología
- Se suelen pensar diagnósticos alternativos más comunes (asma, enfermedad cardiovascular)
- Mayores probabilidades de demora:
  -Jóvenes (confusión con enf. psicológicas)
  -Comorbilidades (EPOC, SAHOS, enfermedad renal)
- No se piensa en esta entidad

Clínica

- **Síntomas→** inespecíficos y están presentes en otras patologías cardíacas y pulmonares más frecuentes

✓ **disnea**
✓ **fatiga**
✓ **debilidad**
✓ **angina**
✓ **síncope**
✓ **palpitaciones**

Inicialmente en esfuerzo → **<u>Casos avanzados</u>**
Síntomas en reposo

Sospechar la enfermedad en sujetos con disnea sin causa aparente

Hemoptisis (ruptura de AB hipertrofiadas)
Voz ronca (Compresión laríngeo recurrente)
Sibilancias (Compresión vía aérea)
Angina/Sincope (Compresión TCI)

Galie N, Humbert M. 2015 ESC/ERS .

Exámen Físico

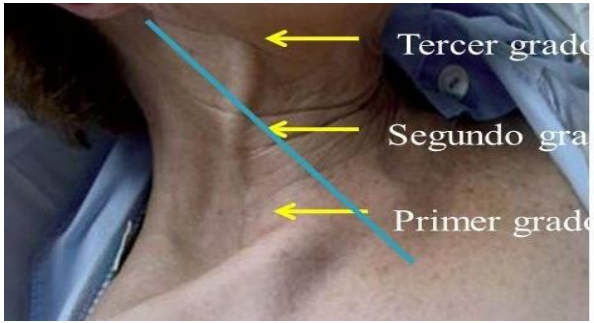
- Latido sagital: latido paraesternal izquierdo positivo con retracción de la zona de la punta(dilatación del VD) La inspiración acentúa intensidad y amplitud
- R2(P2) pulmonar acentuado
- R3 del VD (disminución de distensibilidad del VD)
- Soplo Holo sistólico de IT por dilatación anillo
- Soplo protomeso diastólico de IP por dilatación del anillo pulmonar (Soplo de Graham Steel)
- Pulso hepático, por transmisión flujo desde VD : IT severa

Galie N, Humbert M. 2015 .

Exámen Físico

Disfunción del VD: **Signos de Congestión venosa:**

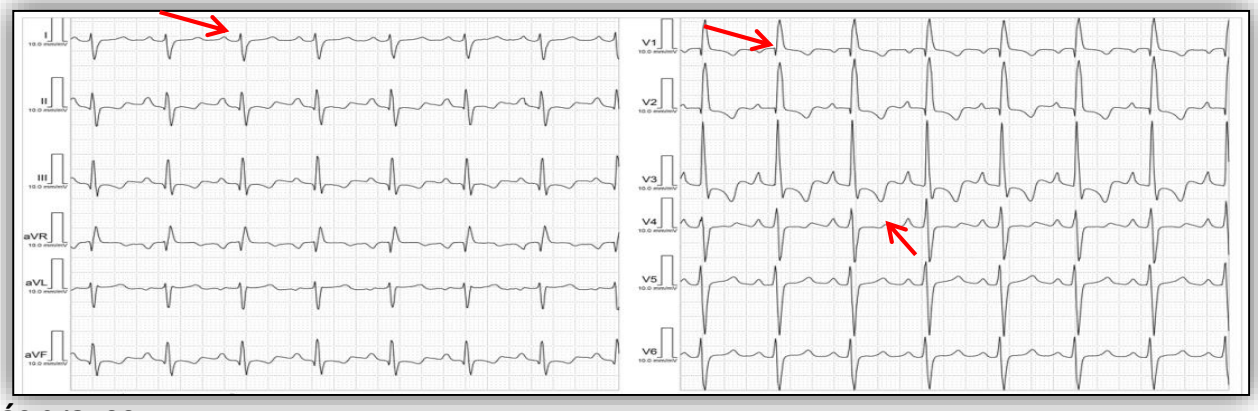
-Ingurgitación yugular
-RHY positivo
-Hepatomegalia
-Edemas MII
-Derrame Pleural
-Ascitis
-Cianosis



Strange G. Pulm Circ 2013 Jan-Mar; 3(1): 89–94

Electrocardiograma

ECG normal no excluye el diagnóstico



<u>ECG anormal es probable en casos más graves</u>:

- **Eje a la derecha** (desviación del eje QRS >90°-complejo negativo DI avl positivo DIII y avf)
- **Agrandamiento AD : onda P pulmonar** (amplitud onda P >2,5 mm DII)
- **HVD** (R altas en precordiales derechas,S profundas en izquierdas)
- **Trastorno repolarización en precordiales derechas (ondas T negativas asimétricas con depresión ST-T)**
- **BCRD**
- **Taquiarritmias : Taquicardia Sinusal**

Galie N, Humbert M. 2015 .

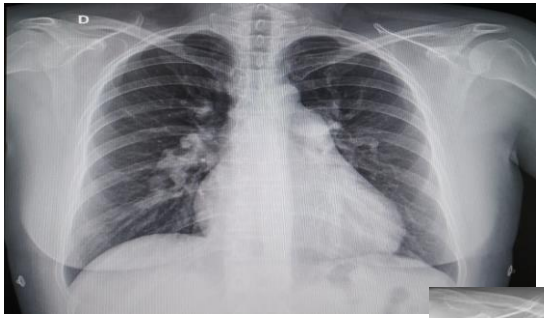
Rx torax

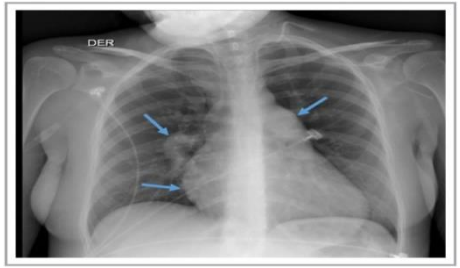
Normal en el 90% de los casos

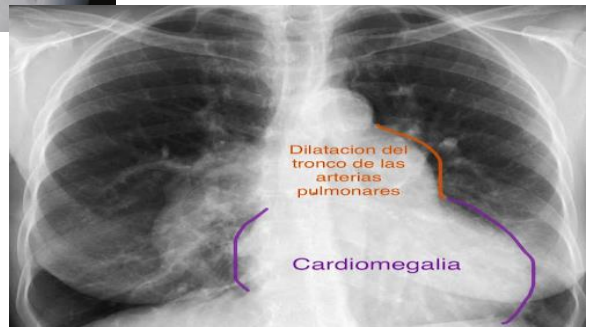
- Dilatación de AP central
(con perdida vascular periférica)

- Agrandamiento AD y VD

- Sin relación con la magnitud de HTP







La radiografía de tórax no es suficiente para el diagnóstico de HP pero, al igual que el electrocardiograma, forma parte de los estudios iniciales.

Algoritmo diagnóstico

RR=rate ratio. PAH=pulmonary arterial hypertension. *Atrial septostomy were not reported in any study. †Data from the combination subgroup of the SERAPHIN trial are included in this analysis because they were available in a subsequent article.[45] However, these data were not included in the primary analysis because admission to hospital was not included in the definition of clinical worsening in SERAPHIN. ‡All deaths, including those as first event of clinical worsening and those after censoring for another event. Data from PHIRST,[31] EARLY,[40] PATENT-1,[29] and SERAPHIN[35] for the subgroup of patients already on background therapy were not available. Therefore, data from the entire study population were included for this secondary analysis. However, the exclusion of these studies did not modify the results for the all-cause mortality (RR 0·88 [95% CI 0·72–1·06], p=0·18). §Data from SERAPHIN[35] for the subgroup of patients already on background therapy were not available. The exclusion of this study yielded similar RRs for PAH-related mortality (RR 0·81 [95% CI 0·61–1·08]).

Mensajes

- La HP grupo II y III son las mas frecuentes.
- La HAP es una entidad heterogénea con elevada morbimortalidad.
- El diagnostico precoz es fundamental. El ecocardiograma doppler es la herramienta inicial de sospecha de esta entidad.
- Los síntomas son inespecíficos por lo que el interrogatorio y los estudios complementarios pueden ayudar a sospecharla y derivar a centro de referencia de HP.
- La confirmación diagnostica se realiza por cateterismo cardiaco derecho en estado de euvolemia y reposo.
- Una vez realizado el diagnostico y definido el pronostico, es fundamental comenzar con el tratamiento especifico en HAP.

Muchas Gracias
